

STROKE

By: Devika Mathur

What is a stroke?

A stroke is a type of emergency in which the blood supply is blocked from the brain, causing the brain cells to die in a matter of four to six minutes. This can cause brain damage, disability or death.

TWO TYPES OF STROKES

1. Ischemic - blood clot or blocked artery.

2.Hemorrhagic - blood vessels leak or burst.

Note: Hemorrhagic strokes are uncommon but fatal due to rapid blood leak

SYMPTOMS

BE FAST!

. Balance - sudden loss of balance.

. Eyes - vision loss in one or both eyes.

. Face- lop-sided and dropy from one side

. Arms - one arm will sag or feel numb when raised.

. Speech - slurred speech or difficulty in sentence structure.

. Time - immediate help!

ISCHEMIC STROKES

. Thrombotic Clots - in the blood vessle and blocks blood vessels; usually due to atherosclerosis (plaque buildup). This is common in individuals with high blood pressure , diabetes etc,

. Embolic Clots - start of externally and travel up the blood stream and cause difficulty. They block the cerebral artery from blood flow.

HEMORRHAGIC STROKES

. High blood pressure

. Brain aneurysm

. Cerebral amyloid angiopathy

. Blood thinning Medications

. Moyamoya - narrowing or closing of blood vessles
